

Ask us how to get more out of your bookkeeper (that's us)

We recommend | myob

MYOB partner

Hi,

In business, efficiency is everything. Every time you or your staff have to go back and repeat work, track down a missing piece of information or apologise to a client because a job is delayed, you're wasting time and losing money.

If you're using older systems or manual processes that no longer fit the scope of your business, you could be missing out.

Making new connections

The good news? Modern business management software is a gamechanger for small and medium sized businesses.

Here's how it could change things in your business:

- **Accurate data:** account information feeds through from your POS, bank accounts and other systems, keeping everything up-to-date and accurate.
- **Accounting access:** give your bookkeeper access to all your business data and systems – including bank feeds – so they don't have to wait for updates.
- **Streamlined workflows:** connect people and data to create smooth, error-free workflows.
- **Cloud access:** working in the cloud means you and your team can work anywhere – you just need an internet connection.
- **Automation:** automate key tasks and processes to save time and reduce the risk of

errors.

- **Transparency:** with everything in one place, it's far easier to track spending, see trends and make the right business decisions.

Want business management functions, automated access for your accountant and cloud access in one neat package? We can help. Talk to us today and find out how a new business management system from MYOB could be the answer.

The team at Modern Bookkeeping.
